de santé publique*

Québec 

# Objectives

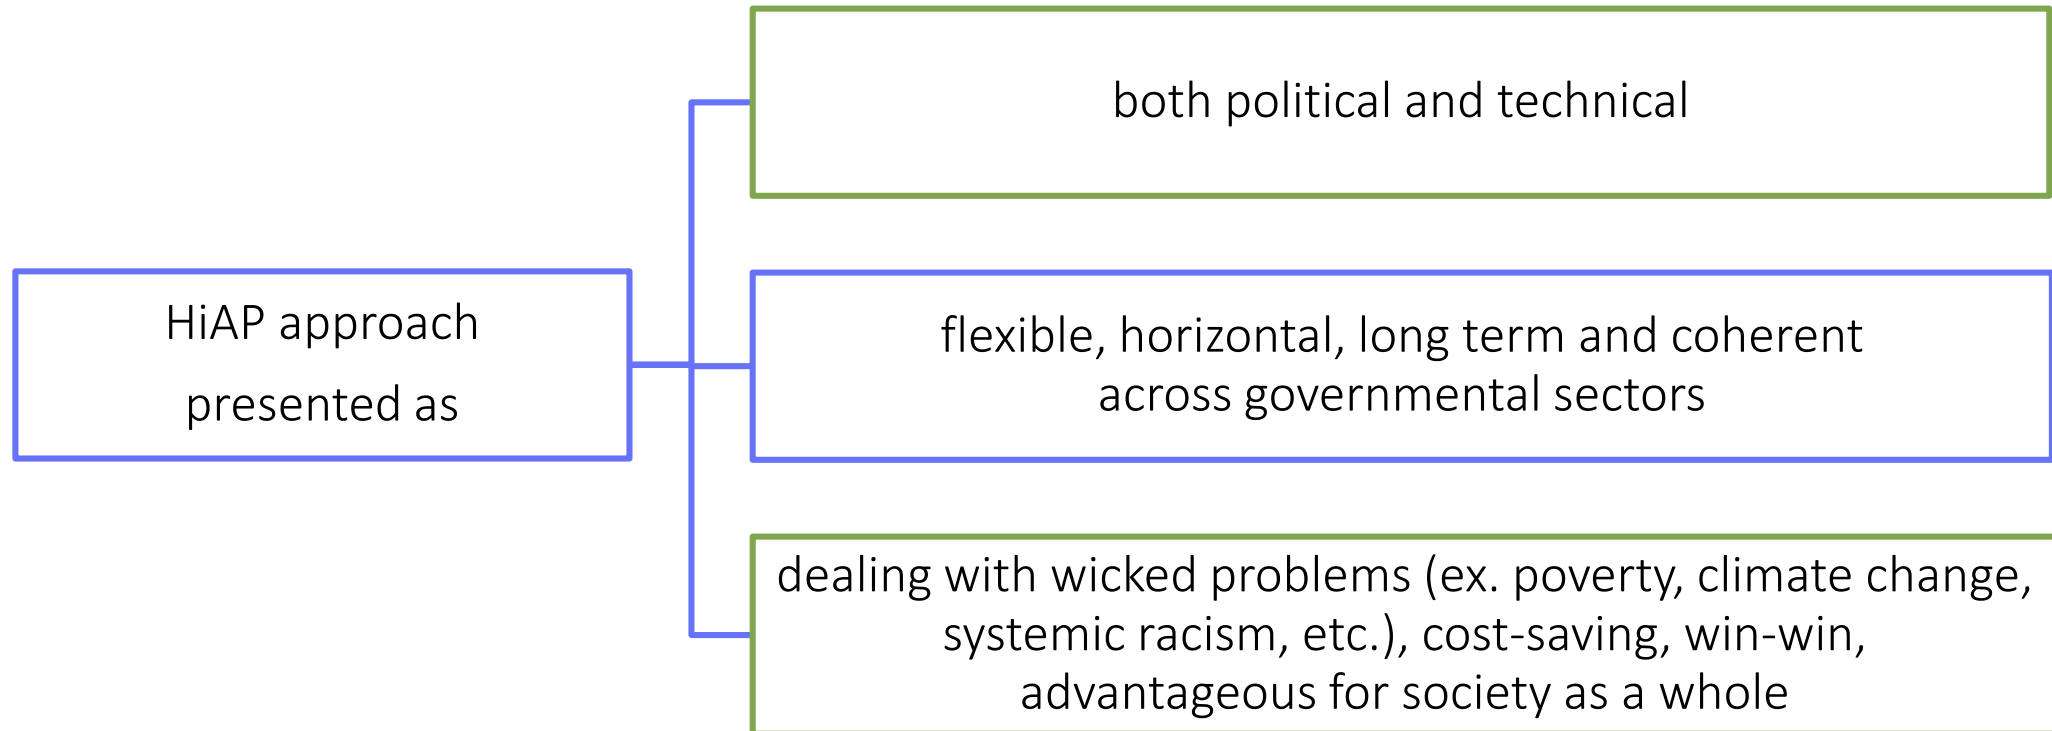

- Listing and analyzing existing HiAP trainings.
- Identify tendencies in terms of format and content.
- Maximize existing resources and avoid duplication.
- Contribute to a wider reflection about HiAP implementation in Canada.

# Methodology

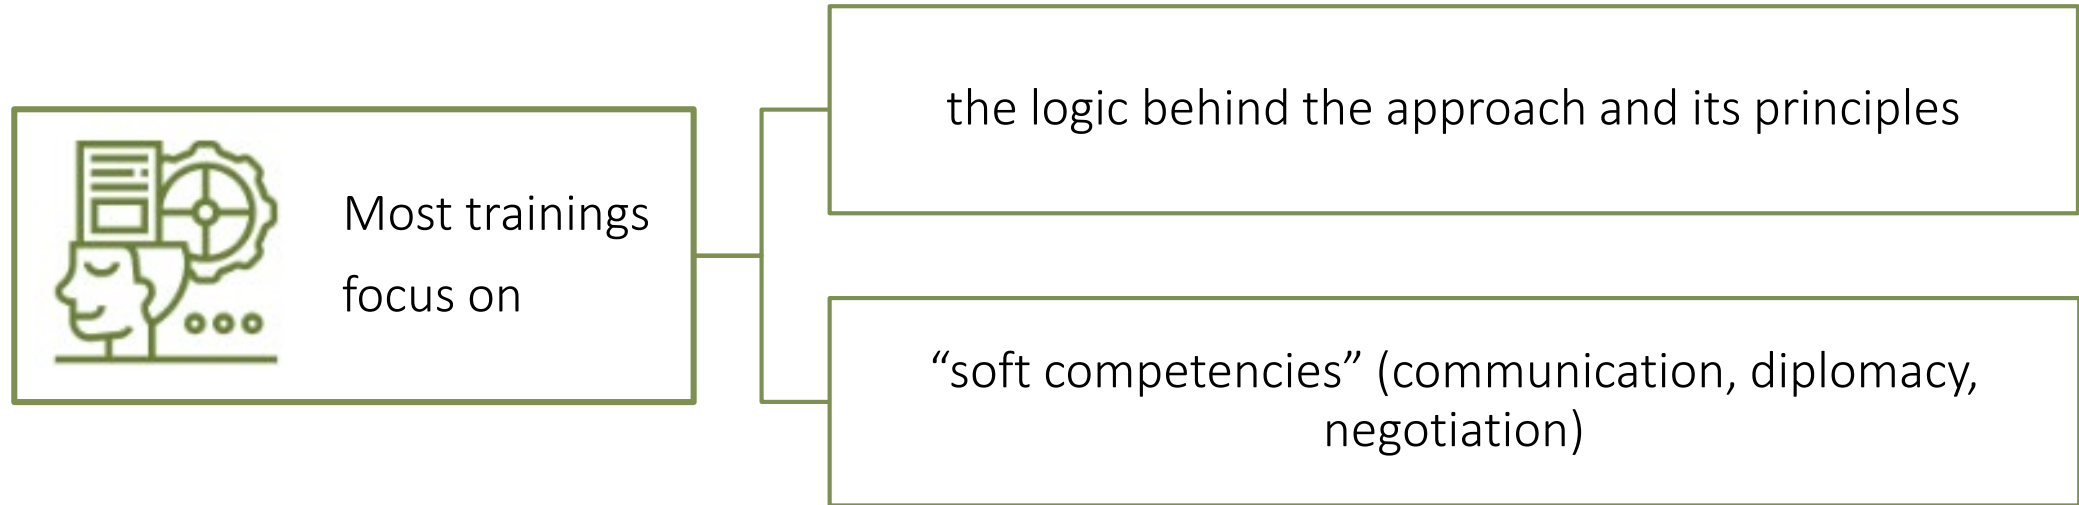

- 85 Trainings: workshops, guides, webinars, conferences, courses
- Content Analysis
- Quantitative and qualitative

# Qualitative Findings

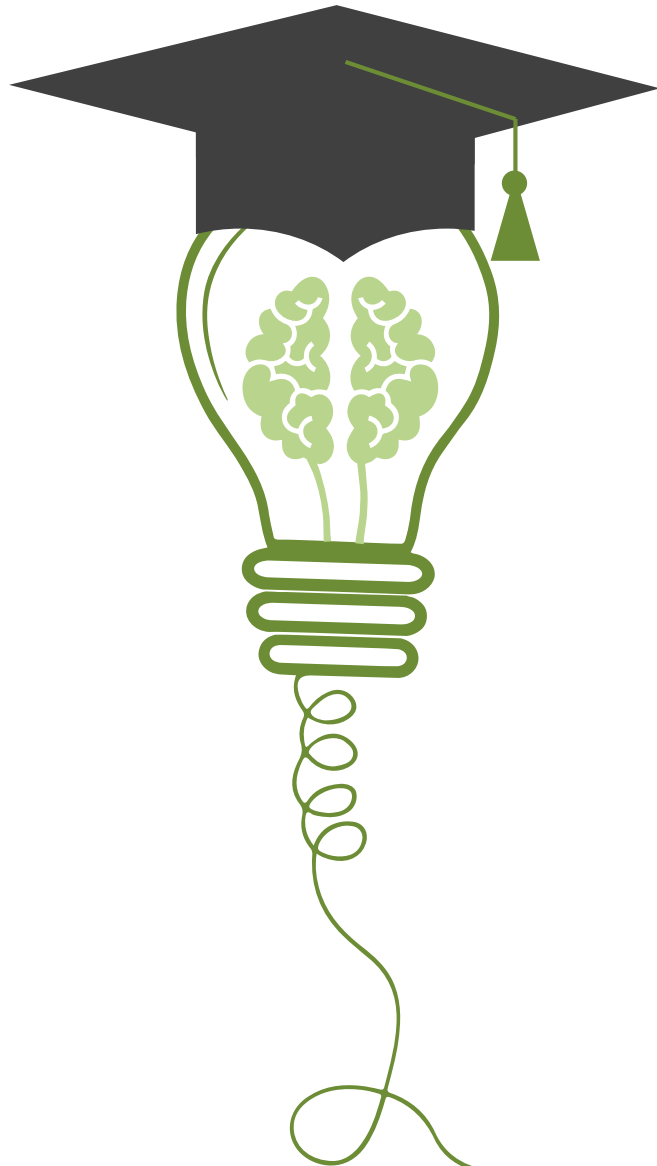

# Qualitative Findings

Tools presented tend to be more conceptual than practical

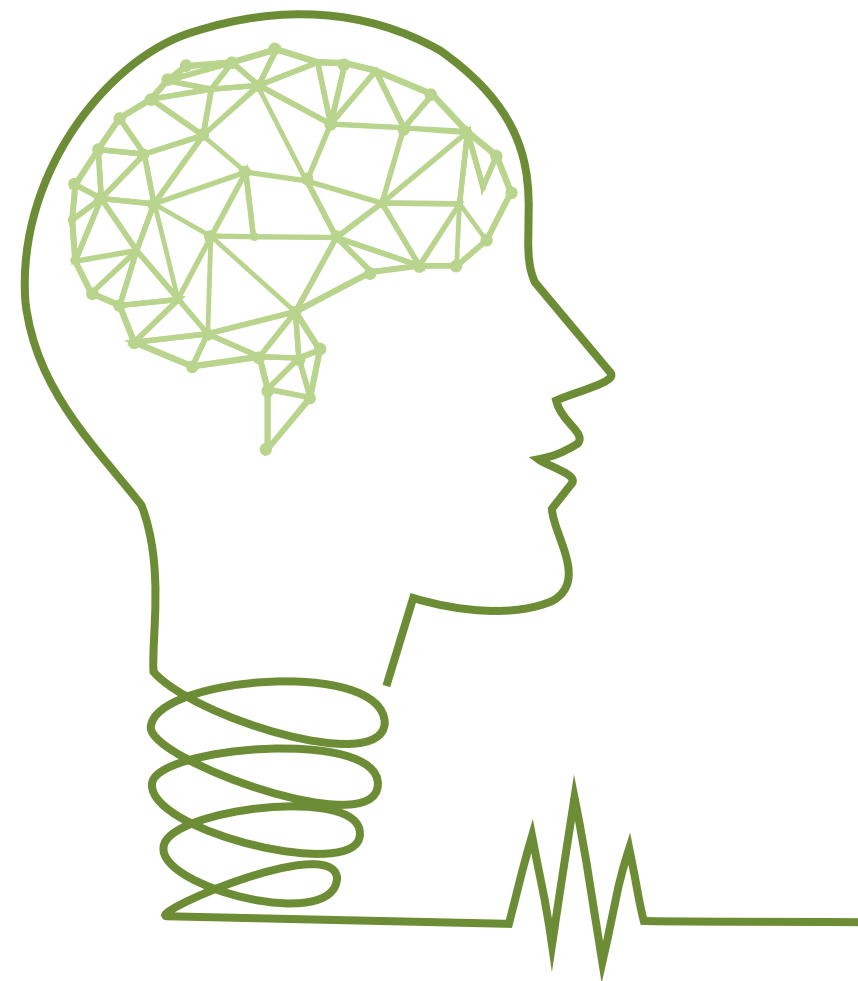

## Discussion

- 01 Comprehensive learning content to integrate HiAP fundamental principles and general understanding of the approach.
- 02 Limited means to transform these learnings into application.
- 03 Trainings mostly for health or public health actors.
- 04 No training is adapted specifically to the Canadian context(s).

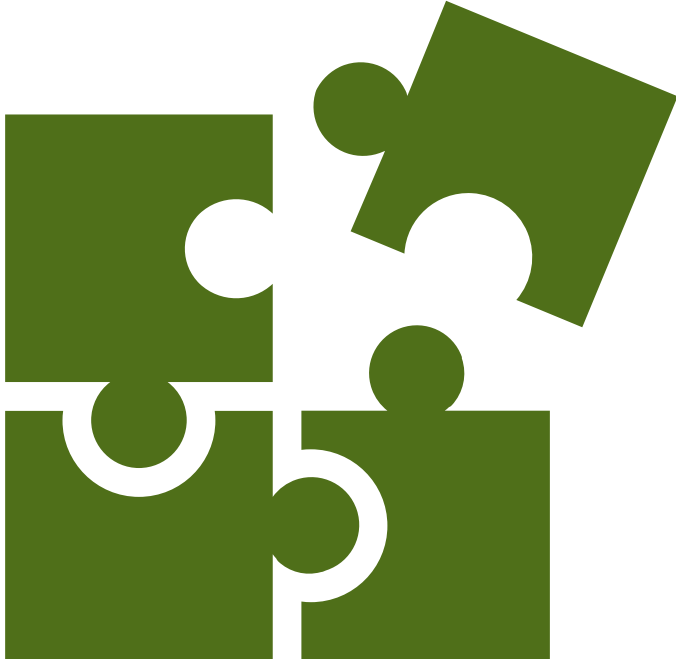

# REFLECTION

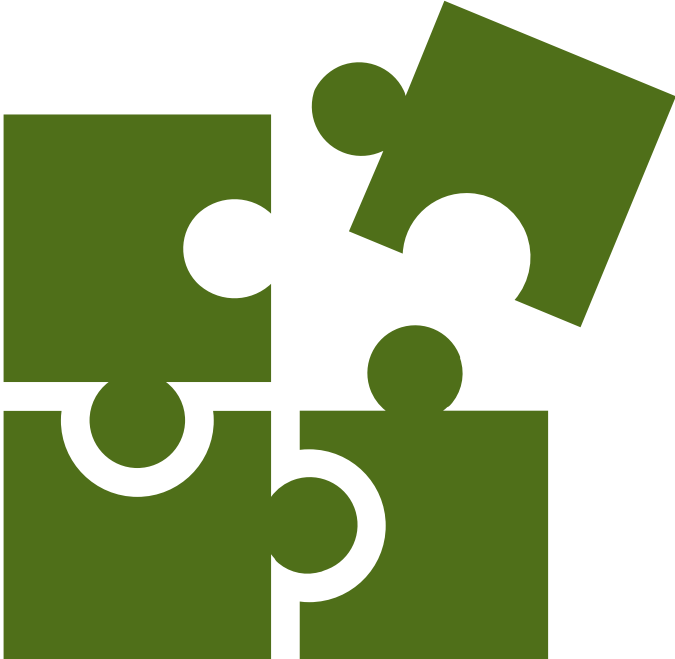

- 01 At this stage of HiAP development, concrete and applicable trainings would be beneficial: tangible policies and tools, support to implement HiAP in specific contexts, etc.
- 02 Workshops adapted to specific actors, organisations, contexts, different sectors, Canadian realities.
- 03 Additional suggestions:
  - Needs assessment
  - Virtual course including modules aimed at different sectors or actors.
  - Guidance by experts

# Questions

# Discussion period
